

INNOVATIVE SHIPPING PACKAGE

ABSTRACT OF THE DISCLOSURE

A container package assembly comprises a first support member and a second support member, each of which have a front side, a back side, a right side and a left side. The support members being arranged along a common plane wherein one of the sides of the first support member is immediately adjacent to one of the sides of the second support member. Each of the support members further comprise at least one wall defining at least a portion of at least one of the front side, back side, right side and left side of the first support member and second support member. Containers are positioned on the support surface of the first support member and the second support member. A top pad is positioned on top of the containers and extends over at least a portion of each of the containers. The support members, the containers and the top pad comprise an assembly which is at least partially encapsulated by a film.
